

UNC DERMOLOGY

For those skins requiring special care

UNC DERMATOLOGY is a line formulated with natural active ingredients that bases its high efficiency on 100% natural baobab* oil, avocado and mango extracts, jojoba, grape seed and olive oils, and vitamins E and F.

Baobab is popularly known in Tanzania as "the life and longevity tree", because there are subjects over 3.000 years old, and has been used by African women for thousands of years to protect the skin against the external aggressions of the hard savannah, repair, nourish and fight the dryness and other skin disorders.

Avocado and mango extracts, these two fruits are more and more studied by the scientific community because of their antioxidant, repairing and protecting power. Together with other natural active ingredients such as jojoba, grape seed and olive oils, and Shea butter that provide, among others, an extra supply of lipides that are similar to those of the skin with multiple benefits.

Equally, **vitamins E and F**, due to their antioxidant, repairing and calming properties, significantly contribute to the intensive action exerted by the **UNC DERMATOLOGY** line products: they moisturise, repair, soften, reduce redness, soothe, help the skin tissue, develop a powerful vasoprotective action and deeply reinforce both the barrier and the skin natural defence functions.

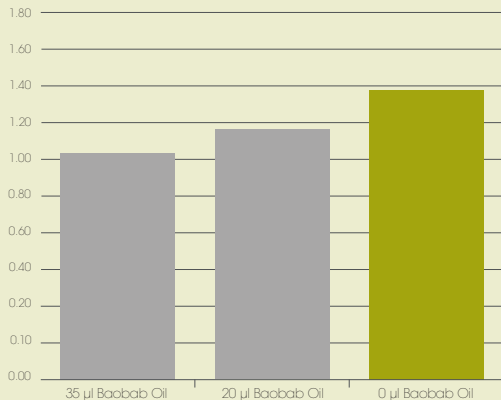

(*) Certified by Ecocert.

Its composition, rich in natural active ingredients, provides high tolerance to **ONC DERMOLGY** line, indicated to help the skin balance and the skin and natural vitality and its annexes (nails and hair) restore in those **skins requiring special care**:

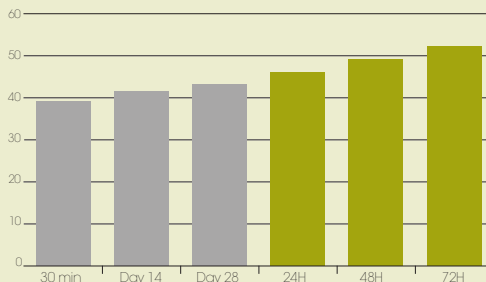

- Highly dehydrated and delipidised (lacking lipides).
- Desquamated and with redness.
- Undergone to oncological treatments.
- Sensitive and reactive.
- Exposed to pollution and other adverse environmental factors.

The new line **ONC DERMOLGY** allows, besides, preparing the skin before receiving an oncological treatment, and also minimising the negative effects that these aggressive medical treatments have on them.

IN VITRO STUDY: evaluation of organic baobab oil on arachidonate lipoxigenase 5 expression, inflammatory mediators releaser.

IN VIVO STUDY: evaluation of the hydration degree (recovering of the barrier function).

Results:

- Up to 39% instant increase in hydration.
- Up to 51% increase in hydration after 3 days.

ONC DERMATOLOGY

THERMAL LOTION

Face and body lotion of intensive action with very low oily content and high concentration of thermal water and rose-water that increase their mineralising, repairing, balancing and vasoprotective properties. It is presented in a bottle with atomiser in order to facilitate its application in those situations in which the skin does not tolerate being massaged.

Active ingredients: thermal water; baobab oil; mango and avocado extracts and rose-water.

Presentation: 125 ml

C.N.: 180515.7
